

Marine Biologist

Marine Biologist required for our client to provide marine environmental scientific support.

The candidates should have:

- A multidisciplinary science base, majoring on one of the following themes but with significant experience of one or more others: coastal & estuarine hydrography; coastal geomorphology; shoreline management; marine chemistry; ecotoxicology; marine and/or estuarine ecology.
- Experience of technical assessment in relation to environmental protection, and/or Water Framework Directive, and/or Habitats Directive interests.
- Good understanding of both current and anticipated marine environmental regulatory requirements.
- Experience in the management and organisation of multidisciplinary scientific projects.
- Qualified to 2nd degree level or equivalent in one or more relevant disciplines.
- Highly numerate, lucid both in verbal and written communications.
- Excellent small team skills.
- Full driving license required.
- Willingness to travel both widely and frequently in the UK and France as required.
- Experience with large scale cooling water systems and their environmental assessment would be of benefit.

The preferred base for these individuals would be Barnwood, Gloucester.
