

New at Newcastle University - MSc in Aquaculture Enterprise and Technology

Newcastle University is expanding its exciting marine science portfolio to include an MSc course in Aquaculture Enterprise and Technology. Join us to enjoy high level training in aquaculture from academics, marine scientists, technologists and aquaculture managers.

You'll learn about everything from aquaculture production and marketing through to farm system design and environmental compliance. On top of that the course offers advanced entrepreneurial skills training to make you a desirable and valuable future employee or to allow you to establish your own successful aquaculture business.

As part of the course you will experience Shetland, working with NAFC Marine Centre in the UK's highest value production area. Visit leading industry experts and see their businesses, you will also have the opportunity to implement your own novel aquaculture business ideas.

Benefit from the full breadth of our marine science knowledge at Newcastle, with aquaculture and marine science projects not only in Europe, but in Africa, Asia, the Pacific Islands and the Caribbean.

Benefit also from our close association with The Aquaculture Science Technology and Enterprise Center (ASTECC), the United Kingdom's only aquaculture business incubation service, providing facilities and funding for aquaculture business start-up ventures.

At Newcastle University you'll find the knowledge, skills, environment and support you need to flourish in the growing aquaculture sector!
